

After having casted a rough tube by the continuous casting procedure, the tube must have a mechanical treatment to increase the density of the metal. During this process, we will define the perfect outside and inside diameter by using hydraulic force in combination with carbide dies and inside cores. The standard equipment includes a complete set of tools which covers all tube dimensions : outside diameter 29 to 20 mm and and inside 23 to 14 mm (others upon request).

### MOD. HTP/20

### Technical information :

- Dimensions : 1100 x 500 x 2100mm
- Power supply : 380/400 V 3 ph
- Weight : 340 kg
